

Construction Progress Imaging

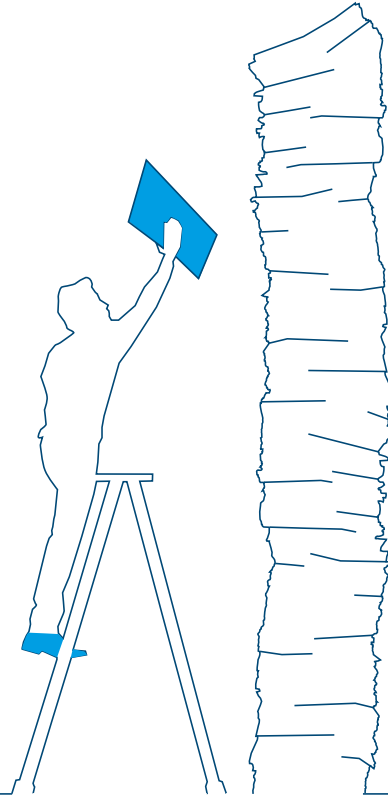

Our story...

Once upon a time,
**construction site
managers**

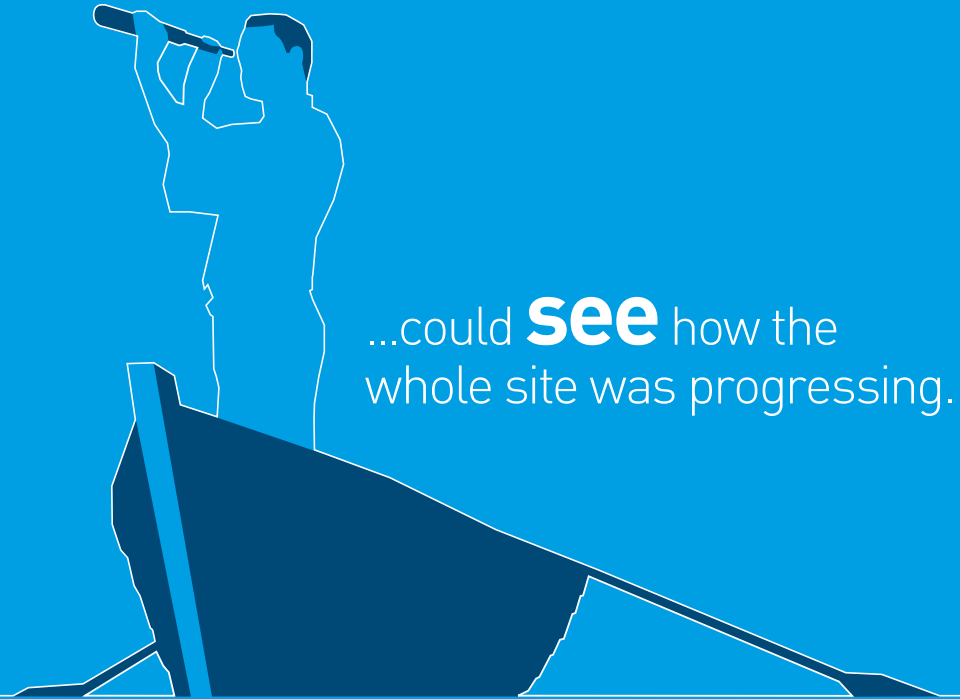

had to compete
regular site progress reports.

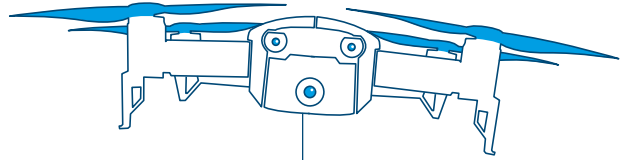

Lots of
progress reports.

The problem was
the process was **slow, inconsistent,**
time consuming,
open to interpretation,
sometimes incomplete,
and only a few stakeholders...

...could **see** how the
whole site was progressing.

**THEN
DRONES
TOOK OFF**

People with the right construction knowledge looked at drones and...

A really **smart** proposition was developed.

Construction project managers were...

...**over** the
moon

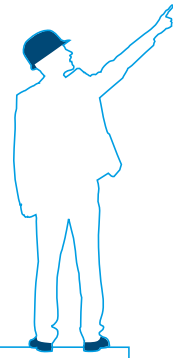

Drones provided a unique perspective.

Faster, than anything that came before and with **real-time** information on construction progress that **couldn't be misinterpreted.**

Suddenly, project managers could share visual progress with every stakeholder quickly and easily.

They could see difficult-to-access areas

Plus, they could view stockpiles that helped **reform** their planning, **streamline** the building process, and **improve safety**.

Project managers were winning.

The reporting process improved. It became **smarter, faster**, more **informed** and much, much more **cost-effective**.

Projects could also be commissioned with a full set of marketing images.

And, happily for the
construction sector...

...there's a
new hero
in town.

Sky Revolutions, (a really smart drone operator)

continues to help the construction sector with fully compliant CDM and insurance-compliant progress imaging, CAA approved pilots & decades of construction expertise.

The end...

...or is it the beginning?
